

TRANSPORT AND CLIMATE CHANGE

When traveling, you can move to places with a different climate, but what you travel can put you in a different climate without changing your home. Burning liquid fuels in transport is not only a threat to the climate, but also to the country's energy security. Poland is 100% dependent on oil imports and 70% on gas imports. By burning oil, gas or gas, we mainly support the economy of other countries, not our own.

CARBON DIOXIDE EMISSION (passenger transport):

- Air transport: 118
- Road transport: 115
- Sea transport: 41
- Rail transport: 41
- Metropolises
 - * grams of CO₂ / 1 passenger / 1km

CARBON DIOXIDE EMISSION (freight transport):

- Road transport: 77
- Inland waterway transport: 62
- Rail transport: 22
- Sea transport: 14
- Metropolises
 - * grams CO₂ / 1 ton / 1km
